DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING
ISLAMIC UNIVERSITY OF TECHNOLOGY

In this lab, you have to create the interface of an online food ordering app in Figma. The pages will look like the following example.

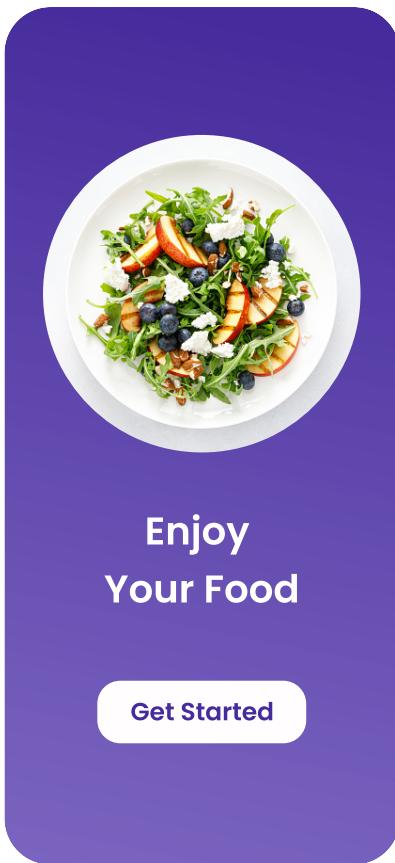

Figure 1: Landing Page

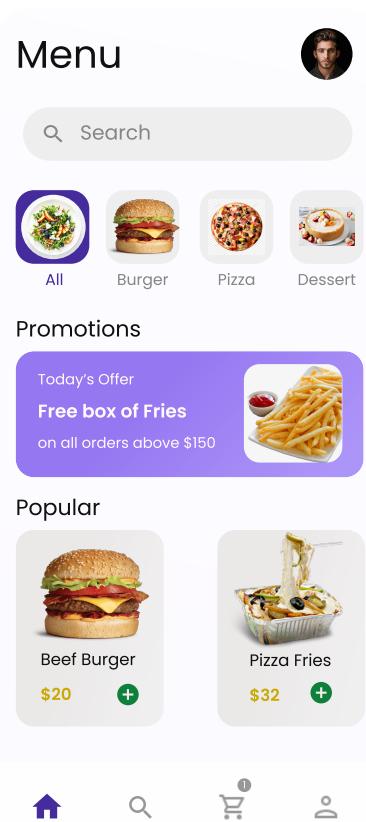

Figure 2: Home Page

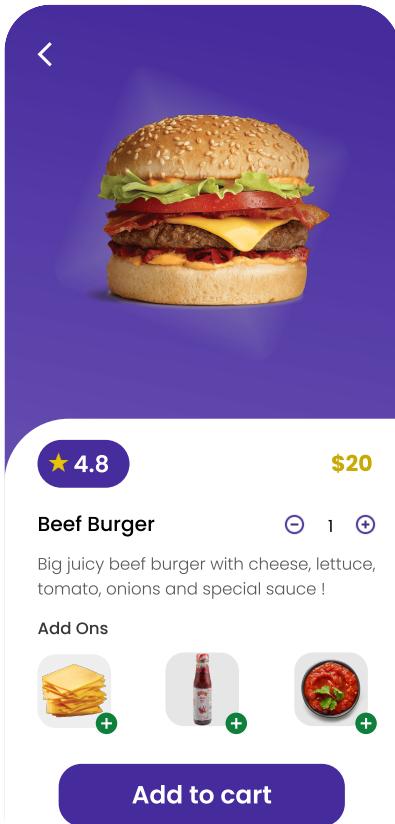

Figure 3: Item Page

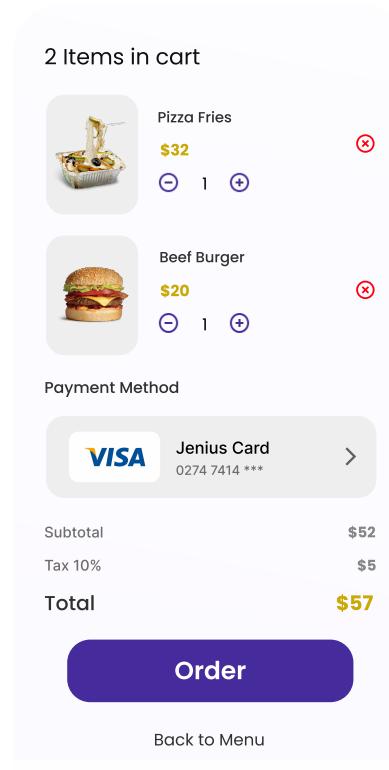

Figure 4: Cart Page

- Design the individual pages first.
- Add navigation.
 1. From Landing page to Home page -> clicking “Get Started”.
 2. From Home page to Item page -> clicking “Beef Burger”.
 3. From Item page to Cart page -> clicking “Add to cart”.
 4. From Cart page to Home page -> clicking “Back to Menu”.
- Add a horizontal scroller on the Home page for the food filtering section.
- Add a vertical scroller on the Home page for more popular items (keep the bottom navbar, header, and search bar static).
- Optionally, you can work with the remaining pages (search page and profile) and add some suitable navigation options.

After finishing the task download a local copy (.fig file) and submit it to Google Classroom.

For further references see [Food Ordering App](#) and [Horizontal and Vertical Scroll](#).
